

ABSTRACT OF THE DISCLOSURE

A fabric care composition that contains from about 0.01% to about 1% fabric softening active by weight, a solvent, and the balance adjunct materials. The fabric care composition is substantially free of starch, and substantially free of silicone. A fabric care method that includes the steps of providing the fabric care composition as described above, applying the fabric care composition directly onto a fabric such as by spraying, and ironing the fabric. A fabric care kit containing a container having a hollow body member having at least one reservoir, an application mechanism connected to the reservoir, and the described fabric care composition. A method and kit for diluting and applying a concentrated fabric care composition where the concentrated fabric care composition contains from about 1% to about 75% fabric softening active by weight, a solvent, and the balance adjunct materials and where the concentrated composition is diluted with the dilution solvent at a dilution ratio of from about 1:1 to about 1:100.
